

## FOUNDATION PIERING & SUPPORT SYSTEMS

### CHANCE® HELICAL PIER SYSTEM

CHANCE Helical Pile systems are used to stabilize structures by transferring the load of the building or home to the helical bearing plates installed to a stable depth. This proven system is an economical solution for underpinning foundations. Fast, predictable, and measurable are just three advantages of this building code evaluated and accepted method. You can Trust CHANCE - the certified helical pile.

### ATLAS® RESISTANCE PIER SYSTEM

The Atlas Resistance Piles are hydraulically pushed pipe segments used to support or stabilize homes and commercial/industrial structures that have settled due to a wide variety of soil problems. Atlas Resistance® Piers not only stop settlement but can also be used to raise and realign structures, thus correcting other structural flaws resulting from settlement and/or ground movement.

### FLOOR SUPPORT COLUMN SYSTEM

The Intech Support Column System replaces conventional concrete block, brick, and wood timber posts by providing superior support to existing beams and floor joists in your crawl space. The strength and adjustability of this system enables adaptability to any crawl space application. No other system matches the strength of the Intech Floor Support Column System.

### WALL ANCHORING SYSTEMS

### CHANCE® HELICAL WALL ANCHORING SYSTEM

Concrete basement, crawl space, and foundation walls become stressed when there is significant pressure against them. Build up of moisture in the soil around the foundation can lead to significant damage that must not be ignored. Intech Anchoring is proud to offer the Chance Helical Wall Anchor System to permanently protect and support foundations. Oftentimes, this system is used to correct and undo the damage that has been caused by the forces exerted by expansive soils. Most importantly with the CHANCE helical anchors, there is no maintenance required after the installation.

ANCHORING SYSTEMS

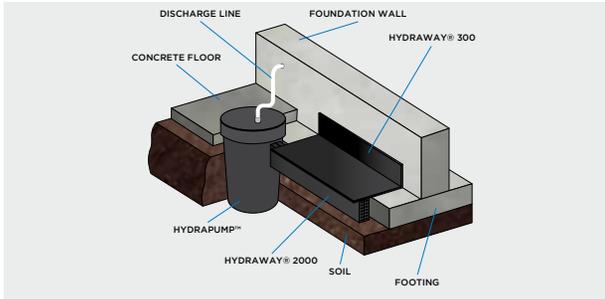

## FOUNDATION REPAIR & WATER DRAINAGE SOLUTIONS

Intech Anchoring Repair Products

INTECH ANCHORING SYSTEMS

## WATERPROOFING SOLUTIONS

### HYDRAWAY® DRAINAGE SYSTEM

Intech manufactures the patented Hydraway Drainage System to provide the ultimate protection against incoming water to your home. The Hydraway System removes up to 70% more water than conventional rock and pipe “drain-tile” systems and furthermore, making it the fastest drainage system in the world!

### HYDRAPUMP® SUMP PUMP SYSTEMS

Sump pumps are critical to the effectiveness of any drainage system. Sump systems are needed to push water up and out of the basement or crawlspace through the discharge pipe. To handle even the most extreme situations, we offer traditional single, dual, and even triple pumping systems to handle the most challenging systems. We also offer sealed sump pits and battery back-up pumps that can complement any of these water management options.

### HYDRASHIELD® BASEMENT WALL COVERING

The Hydrashield Wall Paneling System consists of rigid panels to brighten up your basement, transforming the space into a functional living area. The Hydrashield panels are easy to install and are accompanied with mounting fasteners and all the necessary trip components.

### HYDRABREEZE® DEHUMIDIFIERS

A dehumidifier is essential to maintain healthy air quality in your home. High moisture levels in a basement or crawlspace can lead to musty odors, mold, and even wood rot if left unaddressed. Our Hydrabreeze System is application specific, available models specific to either Basements or Crawl Spaces.

### HYDRALINER® ENCAPSULATION

The Hydraliner Crawl Space Encapsulation System provides complete protection from damp, moist soil conditions often present in dirt crawl spaces. The Hydraliner System reduces the humidity in a crawl space by containing the moisture vapors within the soil. Reducing the potential for mold to thrive in and around your home leads to improved air quality while minimizing the allergens in the air.

## CRACK REPAIR

### CARBONBOND® CARBON FIBER

The Carbonbond Structural System is used to reinforce and strengthen poured concrete and block foundations and basement walls. Constructed of woven Carbon Fiber, these reinforcement straps can prevent damage to concrete by providing 10 times the strength of steel to resist soil pressure and forces exerted against basement walls and foundations. The Carbonbond system can be easily painted for aesthetically pleasing finish.

### CONCRETE CRACK INJECTION SYSTEM

Our specially formulated crack repair injection system is designed to push water away helping to preserve the strength to concrete. The use of our injection systems provide superior solutions to cracks in concrete basements, foundation walls, and many other concrete structures.
