

# FRENCH DRAIN SYSTEM

Hydraway is an innovative subsurface drainage solution that combines a high-strength polyethylene core that is thermally bonded to a needle-punctured, nonwoven geotextile filter fabric. Translation? Our system offers higher fluid inflow rates that remove water more effectively than a traditional pipe-based drainage solution.

Hydraway offers easier and more affordable drainage installation than conventional systems and protects your investments by lasting far longer than pipes, which clogs, fills with silt, and breaks down over time. Our system doesn't even support fungal growth. Essentially, our solution is more durable than any alternative on the market today.
