

FORCE ARRESTER™

Wall Brace System

Force Arrester™ WBS, exclusively offered by Intech, is an innovative and economical solution for bowing, buckling, tilting, and shifting basement walls.

PROBLEM SOLVED

Moisture causes clay soil to expand and puts extensive pressure on residential foundations. However, hydrostatic forces can be stopped for good with Intech's Force Arrester Wall Brace System.

As basement walls crack and shift inward due to poor drainage and pressure, the value of the home must be protected. The Force Arrester can be installed without any messy excavation or digging on the outside and zero concrete removal on the inside. Most foundations can be structurally repaired and stabilized in as little as one day with the Force Arrester.

WHAT IS IT?

The Force Arrester is a patent pending structural beam support solution for both load bearing and non-load bearing basement foundation walls.

BENEFITS

- **Engineered and load tested** to withstand the forces of nature on residential foundations
- **No mess installation** with zero excavation or digging
- **Control your schedule** by eliminating all weather delays. Complete interior installation
- **A cost competitive solution** for bowing, buckling, tilting and shifting
- **No coring** of holes or concrete removal required
- **Professional appearance**
- **Distributes and manages** the earth's horizontal forces **uniformly**
- **Tightening overtime** can often result in **improvement**
- **Super duty beams custom fit** to foundation walls
- **Powder coated** to protect all steel components
- **Increased production** and crew capacity
- **Increased profitability**

THE DETAILS

- **Tested and trusted** to outperform all other wall brace options
- Offered as a **complete system** - all installation hardware is provide with the system
- Choose the option best for your project:
 - **Perpendicular System** (load bearing)
 - **Parallel System** (non-load bearing), which includes 5' blocking brace (Installation contractor to provide and install any needed wood blocking for the parallel brace system)
- All wall brace systems include a 9' structural beam that can be custom field cut to length

While the material savings is significant, the labor and time savings is huge!
